

PORTABLE PROFESSIONAL ESPRESSO MAKER

INSTRUCTIONS

PRODUCT PARAMETERS

Product model	Product size
CM01	133(L)x80(W)x182(H)mm
Material	**Product net weight**
ABS+PC+PP+SUS304+Silicone	950g
Powder cup capacity	**Built-in battery**
9g	13500mAh
Heating power	**Extraction power**
MAX 150W	MAX 45W
Water heating times	**Charging time**
7-8 times (13500mAh)	3-4hours (13500mAh)

CONTROL PANEL

- \- + Temperature adjustment button（From 86-95℃）
- Water heating button (double click)
- Directly brew mode（double click）
  Cold brew mode（long-press）
- 86℃ Real-time temperature display

⚠ Noted: Once the temperature reaches the set level, the coffee will be automatically brewed.
To prevent accidental activation of the switch by a single click, all coffee brew operations must be initiated by double-clicking the button.

WATER TANK INSTRUCTIONS

Water tank material	SUS 304
Water tank capacity	40ML/80ML (MAX 110ML)

⚠ Noted: Do not use sharp objects, brushes or sharp cleaning items.
Use a clean towel or dry paper to wipe away the remaining water droplets inside the sink, ensuring it is dry and odor-free for the next use.

COMPATIBLE RECHARGEABLE DEVICES

Notebook computer | Ipad | Action camera | Mobile phone | Bluetooth headset | Mini drone

HOW TO USE

Clockwise until it clicks into position.

Assembly Method

Twist strictly counter-clockwise to lock it tight.

Add 40 ml or 80 ml of water (maximum 110 ml).

Mode selection

Click:Power On/Wake up
Hold: Power Off

Direct Brew
Double-click the cup button fastest

Heat and Brew
Doble-click the heat button heats to target temp & extracts

Soak Brew
Long-press the cup button for 2s
Takes 2 minutes
more flavorful,especially cold brew

Temperature Setting

Rotate the panel 180° and hold "+" for celsius or "-"for fahrenheit.
Press "+" or "-" to set temperature (**86**℃~**95**℃)
Tips:Unit Switch(℃/F)

Automatic Extraction

Wait for the process to complete (approx. 2-3 mins for hot brew).

⚠ SAFETY WARNING

- Wait 2-3 minutes after brewing before removing the capsule to avoid pressure burns.
- Do not move the cup during extraction.

SYMPTOMS & SOLUTIONS

(Fault Code)

E1 (E1)
E2 (E2)
E3 (E3)

Symptoms	Reason	Solution
After heating for a while, the **E1** fault code appears. it beeps three times and then shuts down.	No water was added to the water tank, resulting in dry heating	Please add water first before heating.
When double-clicked the heating button to extract the coffee, an **E2** fault code appears and there is a three-tone alert sound.	It was caused by a damaged water tank temperature sensor	Requires factory repair.
When repeatedly heating water to make coffee, an **E3** fault code appears during the heating process. And the machine shuts down after three beeps.	It was due to repeated heating that the battery overheated and the protective mechanism shut it down.	Just allow the battery to cool down for some time and it will return to normal.
When extracting coffee, a slight leakage occurred at the outer side of the extraction head.	**There could be the following reasons:** 1) The extraction head was not tightened properly. 2) There is a defect in the coffee capsule (such as damage). 3) The coffee powder or coffee capsules are reused. (When reused, wet coffee powder can cause excessive extraction pressure, and the machine will automatically release the pressure to protect itself). **4) When extracting with coffee powder, the amount of coffee powder added exceeds the scale line, causing the extraction head to be unable to be tightened.**	
The machine does not respond upon startup.	The machine is out of power. Please charge the machine.	

ACCESSORIES

Main Unit x1 | Brew Head x1 | Storage Bag x1

Capsule Holder x1 | Powder Holder x1 | Fine Filter Mesh x1 | Shower Screen x1

USB Cable x1 | Dosing Ring& Coffee Tamper x1

ATTENTION

- When charging,the battery indicator light flashes. After it is fully charged,all four lights remain on.
- Then included charging cable is compatible with both the 9V voltage fast charger and the 5V voltage charger.
- After the coffee brewing is completed,wait for 2-3 minutes before removing used coffee capsule or coffee clump to avoid being burned by the excessive heat.
- Do not remove the coffee cop during brewing, as hot coffee may splash and cause burns.
- After use, the brew head,capsule chamber and powder chamber can all be rinsed with clean water.
- This product is applicable to various scenarios,such as outdoor activities, air travel,households,and hotels.

KEY SELLING POINTS

- 20 BAR High-pressure Extraction
- Wireless Fast Heating
- 13500 mAh/ 27000 mAh Rechargeable Battery
- 2 in 1 Fit Powder&Capsule Adapter
- Integrated Stand Design
- Easy to Carry
